B7-H1; PD-L1;Programmed cell death ligand 1;B7 homolog 1;B7-H; B7H1; PDL1; PDCD1L1; PDCD1LG1; Q9NZQ7

CD274, also known as PD-L1 and B7-H1, is type I transmembrane glycoprotein that serves as a ligand for CD279 (PD-1). This interaction is believed to regulate the balance between the stimulatory and inhibitory signals needed for responses to microbes and maintenance of self-tolerance. CD274 is involved in the costimulation of T cell proliferation and IL-10 and IFN- $\gamma$ production in an IL-2-dependent and CD279-independent manner. Conflicting data has shown that CD274 can inhibit T cell proliferation and cytokine production, and alternatively, enhance T cell activation. Other studies suggest that CD274 may signal bidirectionally, raising interesting implications for its expression in a wide variety of cell types, including T and B cells, antigen-presenting cells, and nonhematopoietic cells.

APC Excitation and Emission Spectra

Ex:650 nm; Em:660 nm

Isotype Control: APC Mouse IgG2b, к Isotype Control[MPC-11] [Product AGEL1650]
Storage Buffer: Phosphate buffered solution, pH 7.2, containing $0.09 \%$ stabilizer and $1 \%$ protein protectant.
Shipping: Biological ice pack at $4^{\circ} \mathrm{C}$

Stability \& Storage: Keep as concentrated solution. Store at $2 \sim 8^{\circ} \mathrm{C}$ and protected from prolonged exposure to light. Do not freeze. Centrifuge before opening to ensure complete recovery of vial contents. This product is guaranteed up to one year from purchase.

Recommended
Usage:
Each lot of this antibody is quality control tested by flow cytometric analysis. The amount of the reagent is suggested to be used $5 \mu \mathrm{~L}$ of antibody per test (million cells in $100 \mu \mathrm{~L}$ staining volume or per $100 \mu \mathrm{~L}$ of whole blood). Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use.
