## **KLRK1 Rabbit Polyclonal Antibody**

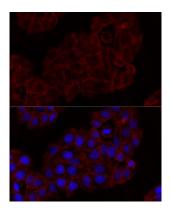

**Protein Background** 

## CAB11964

**Product Information** 

Size:	Natural killer (NK) cells are lymphocytes that can mediate lysis of certain tumor cells and virus- infected cells without previous activation. They can also regulate specific humoral and cell-
20uL, 50uL, 100uL, 200uL	mediated immunity. NK cells preferentially express several calcium-dependent (C-type) lectins,
Observed MW:	which have been implicated in the regulation of NK cell function. The NKG2 gene family is located within the NK complex, a region that contains several C-type lectin genes preferentially
Refer to figures	expressed in NK cells. This gene encodes a member of the NKG2 family. The encoded transmembrane protein is characterized by a type II membrane orientation (has an extracellular
Calculated MW:	C terminus) and the presence of a C-type lectin domain. It binds to a diverse family of ligands
25kDa	that include MHC class I chain-related A and B proteins and UL-16 binding proteins, where ligand-receptor interactions can result in the activation of NK and T cells. The surface
Applications:	expression of these ligands is important for the recognition of stressed cells by the immune system, and thus this protein and its ligands are therapeutic targets for the treatment of
IF	immune diseases and cancers. Read-through transcription exists between this gene and the upstream KLRC4 (killer cell lectin-like receptor subfamily C, member 4) family member in the
Reactivity:	same cluster.
