## **Bcl-W Rabbit Polyclonal Antibody**

## CAB13471

Product Information	Protein Background
Size:	This gene encodes a member of the BCL-2 protein family. The proteins of this family form
20uL, 50uL, 100uL, 200uL	hetero- or homodimers and act as anti- and pro-apoptotic regulators. Expression of this gen in cells has been shown to contribute to reduced cell apoptosis under cytotoxic condition
Observed MW:	Studies of the related gene in mice indicated a role in the survival of NGF- and BDNF dependent neurons. Mutation and knockout studies of the mouse gene demonstrated a
27kDa	essential role in adult spermatogenesis. Alternative splicing results in multiple transcrip variants. Read-through transcription also exists between this gene and the neighboring
Calculated MW:	downstream PABPN1 (poly(A) binding protein, nuclear 1) gene.
