CAB15368

Product Information

Product SKU:	CAB15368	Gene ID:	9815	Size:	20uL, 100uL		
Clone No:	-	Host Species:	Rabbit	Reactivity :	Human		
Additional Information							

Observed MW:	84kDa	Conjugate:	Unconjugated
Calculated MW:	85kDa	lsotype:	lgG

Immunogen Information

Background: This gene encodes a member of the GTI protein family, which interact with G protein-coupled receptor kinases and possess ADP-ribosylation factor (ARF) GTPase-activating protein (GAP) activity. GTT proteins traffic between cytoplasmic complexes, focal adhesions, and the cell periphery, and interact with Pak interacting exchange factor beta (PIX) to form large oligomeric complexes that transiently recruit other proteins. GIT proteins regulate cytoskeletal dynamics and participate in receptor internalization and membrane trafficking. This gene has been shown to repress lamellipodial extension and focal adhesion turnover, and is thought to regulate cell motility. This gene undergoes extensive alternative splicing to generate multiple isoforms, but the full-length nature of some of these variants has not been determined. The various isoforms have functional differences, with respect to ARF GAP activity and to G protein-coupled receptor kinase 2 binding. Recommended Dilution: VB,1:200 - 1:2000 Synonyms: PKL; CAT2; CAT-2; GIT2 Purifcation Method: Affinity purification Immunogen: Recombinant fusion protein containing a sequence corresponding to amino acids 450-510 of human GIT2 (NP_476511.1). Storage: Store at -20°C. Avoid freeze / thaw cycles.Buffer: PBS with 0.01% thimerosal,50% glycerol,pH7.3.
