CAB1575

## Product Information

 Size:20uL, 50uL, 100uL, 200uL
Observed MW:
22 kDa
Calculated MW:
22 kDa

Applications:

## WB

Reactivity:
Human, Mouse

## Antibody Information

Recommended dilutions:
WB 1:500-1:2000

## Source:

Rabbit

## Isotype:

IgG

## Protein Background

This gene encodes a cytokine that belongs to the interferon family of signaling proteins, which are released as part of the innate immune response to pathogens. The protein encoded by this gene belongs to the type I class of interferons, which are important for defense against viral infections. In addition, type I interferons are involved in cell differentiation and anti-tumor defenses. Following secretion in response to a pathogen, type I interferons bind a homologous receptor complex and induce transcription of genes such as those encoding inflammatory cytokines and chemokines. Overactivation of type I interferon secretion is linked to autoimmune diseases. Mice deficient for this gene display several phenotypes including defects in B cell maturation and increased susceptibility to viral infection.

## Immunogen information

## Gene ID:

3456

## Uniprot

P01574

## Synonyms:

IFNB1; IFB; IFF; IFN-beta; IFNB

## Immunogen:

Recombinant fusion protein containing a sequence corresponding to amino acids 30-187 of human IFNB1 (NP_002167.1).

## Storage:

Store at $-20^{\circ} \mathrm{C}$. Avoid freeze / thaw cycles. Buffer: PBS with $0.02 \%$ sodium azide, $50 \%$ glycerol, pH 7.3 .

## Purification:

Affinity purification

Western blot analysis of extracts of various cell lines, using IFNB1 antibody (CAB1575) at 1:1000 dilution. Secondary antibody: HRP Goat Anti-Rabbit IgG (H+L) (CABSO14) at 1:10000 dilution. Lysates/proteins: 25ug per lane. Blocking buffer: $3 \%$ nonfat dry milk in TBST.
