CYP11A1 Rabbit Polyclonal Antibody

CAB16363

Product Information	Protein Background
Size:	This gene encodes a member of the cytochrome P450 superfamily of enzymes. The cytochrome
20uL, 50uL, 100uL, 200uL	P450 proteins are monooxygenases which catalyze many reactions involved in drug metabolism and synthesis of cholesterol, steroids and other lipids. This protein localizes to the
Observed MW:	mitochondrial inner membrane and catalyzes the conversion of cholesterol to pregnenolone, the first and rate-limiting step in the synthesis of the steroid hormones. Two transcript variants
50KDa	encoding different isoforms have been found for this gene. The cellular location of the smaller isoform is unclear since it lacks the mitochondrial-targeting transit peptide.
