CFC1 Rabbit Polyclonal Antibody

CAB17732

Product Information	Protein Background
Size:	This gene encodes a member of the epidermal growth factor (EGF)- Cripto, Frl-1, and Cryptic
20uL, 50uL, 100uL, 200uL	(CFC) family, which are involved in signalling during embryonic development. Proteins in this family share a variant EGF-like motif, a conserved cysteine-rich domain, and a C-termina
Observed MW:	hydrophobic region. The protein encoded by this gene is necessary for patterning the left-righ embryonic axis. Mutations in this gene are associated with defects in organ development
Refer to figures	including autosomal visceral heterotaxy and congenital heart disease. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided by
