Chk2 Rabbit Monoclonal Antibody

CAB19543

Product Information

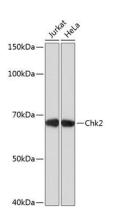

Size: In response to DNA damage and replication blocks, cell cycle progression is halted through the control of critical cell cycle regulators. The protein encoded by this gene is a cell cycle 20uL, 50uL, 100uL, 200uL checkpoint regulator and putative tumor suppressor. It contains a forkhead-associated protein interaction domain essential for activation in response to DNA damage and is rapidly **Observed MW:** phosphorylated in response to replication blocks and DNA damage. When activated, the encoded protein is known to inhibit CDC25C phosphatase, preventing entry into mitosis, and 65KDa has been shown to stabilize the tumor suppressor protein p53, leading to cell cycle arrest in **Calculated MW:** G1. In addition, this protein interacts with and phosphorylates BRCA1, allowing BRCA1 to restore survival after DNA damage. Mutations in this gene have been linked with Li-Fraumeni 62kDa syndrome, a highly penetrant familial cancer phenotype usually associated with inherited mutations in TP53. Also, mutations in this gene are thought to confer a predisposition to **Applications:** sarcomas, breast cancer, and brain tumors. This nuclear protein is a member of the CDS1 subfamily of serine/threonine protein kinases. Several transcript variants encoding different WB IHC isoforms have been found for this gene. [provided by RefSeq, Apr 2012] **Reactivity:** Immunogen information Human Gene ID: 11200 **Antibody Information** Uniprot O96017 **Recommended dilutions:** WB 1:500 - 1:2000 IHC 1:50 - 1:200 Synonyms: Source: CDS1; CHK2; HuCds1; LFS2; PP1425; RAD53; hCds1; CHEK2; Chk2 Rabbit **Isotype:** Immunogen: lgG A synthesized peptide derived from human Chk2. Storage: **Purification:** Store at -20°C. Avoid freeze / thaw cycles. Buffer: PBS with 0.02% Affinity purification sodium azide, 0.05% BSA, 50% glycerol, pH7.3.
