CAB19611

## Product Information Size:

20uL, 50uL, 100uL, 200uL
Observed MW:
110KDa
Calculated MW:
110kDa
Applications:
WB IHC IF
Reactivity:
Human, Mouse

## Antibody Information

## Recommended dilutions:

WB 1:500-1:2000 IHC 1:50
$-1: 200$ IF 1:50-1:200

## Source:

Rabbit

## Isotype:

IgG

## Protein Background

The androgen receptor gene is more than 90 kb long and codes for a protein that has 3 major functional domains: the N -terminal domain, DNA-binding domain, and androgen-binding domain. The protein functions as a steroid-hormone activated transcription factor. Upon binding the hormone ligand, the receptor dissociates from accessory proteins, translocates into the nucleus, dimerizes, and then stimulates transcription of androgen responsive genes. This gene contains 2 polymorphic trinucleotide repeat segments that encode polyglutamine and polyglycine tracts in the N -terminal transactivation domain of its protein. Expansion of the polyglutamine tract from the normal 9-34 repeats to the pathogenic $38-62$ repeats causes spinal bulbar muscular atrophy (SBMA, also known as Kennedy's disease). Mutations in this gene are also associated with complete androgen insensitivity (CAIS). Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Jan 2017]

## Immunogen information

## Gene ID:

367

## Uniprot

## P10275

## Synonyms:

AIS; AR8; DHTR; HUMARA; HYSP1; KD; NR3C4; SBMA; SMAX1;
TFM; AR

## Immunogen:

A synthesized peptide derived from human Androgen Receptor.

## Storage:

Store at $-20^{\circ} \mathrm{C}$. Avoid freeze / thaw cycles. Buffer: PBS with $0.02 \%$ sodium azide, $0.05 \%$ BSA, $50 \%$ glycerol, pH7.3.

Western blot - Androgen Receptor Rabbit mAb (CAB19611)
