## Fbx32 Rabbit Monoclonal Antibody

## CAB3699

## **Product Information Protein Background** Size: This gene encodes a member of the F-box protein family which is characterized by an approximately 40 amino acid motif, the F-box. The F-box proteins constitute one of the four 20uL, 50uL, 100uL, 200uL subunits of the ubiquitin protein ligase complex called SCFs (SKP1-cullin-F-box), which function in phosphorylation-dependent ubiquitination. The F-box proteins are divided into 3 classes: **Observed MW:** Fbws containing WD-40 domains, Fbls containing leucine-rich repeats, and Fbxs containing either different protein-protein interaction modules or no recognizable motifs. The protein 42KDa encoded by this gene belongs to the Fbxs class and contains an F-box domain. This protein is **Calculated MW:** highly expressed during muscle atrophy, whereas mice deficient in this gene were found to be resistant to atrophy. This protein is thus a potential drug target for the treatment of muscle 42kDa atrophy. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Jun 2011] **Applications:** Immunogen information WB IHC Gene ID: **Reactivity:** 114907 Mouse, Rat Uniprot Q969P5 **Antibody Information** Synonyms: **Recommended dilutions:** Fbx32; MAFbx WB 1:500 - 1:2000 IHC 1:50 - 1:200 Source: Rabbit Immunogen: A synthesized peptide derived from human Fbx32 **Isotype:** lgG Storage: Store at -20°C. Avoid freeze / thaw cycles. Buffer: PBS with 0.02% sodium azide, 0.05% BSA, 50% glycerol, pH7.3.

**Purification:** Affinity purification

Western blot - Fbx32 Rabbit mAb (CAB3699)
