CAB5552

Product Information

Product SKU:	CAB5552	Gene ID:	3831	Size:	20uL, 100uL	
Clone No:	-	Host Species:	Rabbit	Reactivity	Human, Mouse, Rat	
Additional Information						

Observed MW:	60-75kDa	Conjugate:	Unconjugated
Calculated MW:	65kDa	lsotype:	lgG

Immunogen Information

Background	Conventional kinesin is a tetrameric molecule composed of two heavy chains and two light chains, and		
	transports various cargos along microtubules toward their plus ends. The heavy chains provide the		
	motor activity, while the light chains bind to various cargos. This gene encodes a member of the kinesin		
	light chain family. It associates with kinesin heavy chain through an N-terminal domain, and six		
	tetratricopeptide repeat (TPR) motifs are thought to be involved in binding of cargos such as vesicle		
	mitochondria, and the Golgi complex. Thus, kinesin light chains function as adapter molecules and not		
	motors per se. Although previously named "kinesin 2", this gene is not a member of the kinesin-2 /		
	kinesin heavy chain subfamily of kinesin motor proteins. Extensive alternative splicing produces isoforms		
	with different C-termini that are proposed to bind to different cargos; however, the full-length nature		
	and/or biological validity of most of these variants have not been determined.		
Recommended Dilution :	WB,1:500 - 1:2000 IHC-P,1:50 - 1:200		
Synonyms:	KLC; KNS2; KNS2A; Kinesin light chain 1 (KLC1)		
Purifcation Method:	Affinity purification		
Immunogen:	Recombinant fusion protein containing a sequence corresponding to amino acids 261-560 of human		
	Kinesin light chain 1 (Kinesin light chain 1 (KLC1)) (NP_005543.2).		
Storage:	Store at -20°C. Avoid freeze / thaw cycles.Buffer: PBS with 0.02% sodium azide,50% glycerol,pH7.3.
