# **CRYGS Rabbit Polyclonal Antibody**

### **CAB7888**

Crystallins are separated into two classes: taxon-specific, or enzyme, and ubiquitous. The latter class constitutes the major proteins of vertebrate eye lens and maintains the transparency and

refractive index of the lens. Since lens central fiber cells lose their nuclei during development, these crystallins are made and then retained throughout life, making them extremely stable

proteins. Mammalian lens crystallins are divided into alpha, beta, and gamma families; beta and gamma crystallins are also considered as a superfamily. Alpha and beta families are further

divided into acidic and basic groups. Seven protein regions exist in crystallins: four homologous

motifs, a connecting peptide, and N- and C-terminal extensions. Gamma-crystallins are a homogeneous group of highly symmetrical, monomeric proteins typically lacking connecting

peptides and terminal extensions. They are differentially regulated after early development. This gene encodes a protein initially considered to be a beta-crystallin but the encoded protein

is monomeric and has greater sequence similarity to other gamma-crystallins. This gene encodes the most significant gamma-crystallin in adult eye lens tissue. Whether due to aging

or mutations in specific genes, gamma-crystallins have been involved in cataract formation.

## Product Information

Size:

20uL, 50uL, 100uL, 200uL

**Observed MW:** 

21kDa

Calculated MW:

21kDa

Applications:

WB

Reactivity:

Human, Mouse, Rat

### **Antibody Information**

Recommended dilutions: WB 1:500 - 1:2000

Source: Rabbit

**Isotype:** IgG

Immunogen:

Synonyms:

CRYGS; CRYG8; CTRCT20

Gene ID: 1427

**Uniprot** P22914

**Protein Background** 

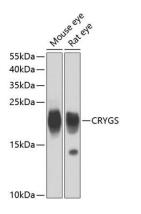

Immunogen information

Recombinant fusion protein containing a sequence corresponding to amino acids 1-178 of human CRYGS (NP\_060011.1).

**Purification:** Affinity purification

### Storage:

Store at -20°C. Avoid freeze / thaw cycles. Buffer: PBS with 0.02% sodium azide, 50% glycerol, pH7.3.

Western blot analysis of extracts of various cell lines, using CRYGS antibody (CAB7888) at 1:4000 dilution. Secondary antibody: HRP Goat Anti-Rabbit IgG (H+L) (CABS014) at 1:10000 dilution. Lysates/proteins: 25ug per lane. Blocking buffer: 3% nonfat dry milk in TBST. Detection: ECL Basic Kit (CABM00020). Exposure time: 1s.
