## HLA-DMB Rabbit Polyclonal Antibody

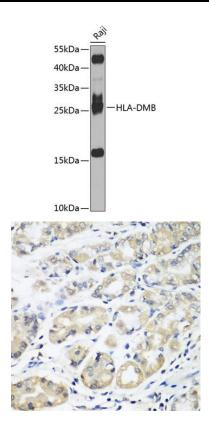

## CAB8384

Product Information Size:	<b>Protein Background</b> HLA-DMB belongs to the HLA class II beta chain paralogues. This class II molecule is		
20uL, 50uL, 100uL, 200uL Observed MW:	heterodimer consisting of an alpha (DMA) and a beta (DMB) chain, both anchored in the membrane. It is located in intracellular vesicles. DM plays a central role in the peptide loading of MHC class II molecules by helping to release the CLIP (class II-associated invariant chain peptide) molecule from the peptide binding site. Class II molecules are expressed in antiger

		Calculated MW:	approximately 26-28 kDa and its gene contains 6 exons. Exon one encodes the leader peptide exons 2 and 3 encode the two extracellular domains, exon 4 encodes the transmembran
