

CABP0227

Product Information							
Product SKU:	CABP0227	Gene ID:	6194		Size:	20uL, 100uL	
Clone No:	-	Host Species:	Rabbit		Reactivity :	Human, Mouse, Rat	
Additional Information							
Observed MW :	29kDa		Conjugate:	Unconjugate	ed		
Calculated MW	: 29kDa		lsotype:	lgG			

Immunogen Information

Background	Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit and a large 60S
	subunit. Together these subunits are composed of 4 RNA species and approximately 80 structurally
	distinct proteins. This gene encodes a cytoplasmic ribosomal protein that is a component of the 40S
	subunit. The protein belongs to the S6E family of ribosomal proteins. It is the major substrate of protein
	kinases in the ribosome, with subsets of five C-terminal serine residues phosphorylated by different
	protein kinases. Phosphorylation is induced by a wide range of stimuli, including growth factors, tumor-
	promoting agents, and mitogens. Dephosphorylation occurs at growth arrest. The protein may
	contribute to the control of cell growth and proliferation through the selective translation of particular
	classes of mRNA. As is typical for genes encoding ribosomal proteins, there are multiple processed
	pseudogenes of this gene dispersed through the genome.
Recommended Dilution:	WB,1:500 - 1:2000
Synonyms:	S6; eS6; Phospho-S6 Ribosomal Protein (RPS6)-S235
Purifcation Method:	Affinity purification
Immunogen:	A phospho specific peptide corresponding to residues surrounding S235 of human RPS6
Storage:	Store at -20°C. Avoid freeze / thaw cycles.Buffer: PBS with 0.02% sodium azide,50% glycerol,pH7.3.
