

Phospho-NFKB1-S893 Rabbit Polyclonal Antibody

CABP0415

Product Information

Size:

50uL, 100uL, 200uL

Observed MW:**Calculated MW:**

85kDa/105kDa

Applications:

IHC IF

Reactivity:

Human

Antibody Information

Recommended dilutions:

IHC 1:50 - 1:200 IF 1:100 - 1:200

Source:

Rabbit

Isotype:

IgG

Purification:

Affinity purification

Protein Background

This gene encodes a 105 kD protein which can undergo cotranslational processing by the 26S proteasome to produce a 50 kD protein. The 105 kD protein is a Rel protein-specific transcription inhibitor and the 50 kD protein is a DNA binding subunit of the NF-kappa-B (NFKB) protein complex. NFKB is a transcription regulator that is activated by various intra- and extra-cellular stimuli such as cytokines, oxidant-free radicals, ultraviolet irradiation, and bacterial or viral products. Activated NFKB translocates into the nucleus and stimulates the expression of genes involved in a wide variety of biological functions. Inappropriate activation of NFKB has been associated with a number of inflammatory diseases while persistent inhibition of NFKB leads to inappropriate immune cell development or delayed cell growth. Alternative splicing results in multiple transcript variants encoding different isoforms, at least one of which is proteolytically processed.

Immunogen information

Gene ID:

4790

Uniprot

P19838

Synonyms:

NFKB1; CVID12; EBP-1; KBF1; NF-kB1; NF-kappa-B; NF-kappaB; NFKB-p105; NFKB-p50; NFkappaB; p105; p50

Immunogen:

A phospho specific peptide corresponding to residues surrounding S893 of human NFKB1

Storage:

Store at -20°C. Avoid freeze / thaw cycles. Buffer: PBS with 0.02% sodium azide, 50% glycerol, pH7.3.

Product Images

Immunohistochemistry of paraffin-embedded human breast carcinoma using Phospho-NFKB1-S893 antibody (CABP0415).
