

CABP0415

Product Information

Product SKU:	CABP0415	Gene ID:	4790		Size:	100uL	
Clone No:	-	Host Species:	Rabbit		Reactivity :	Human	
Additional Information							
Observed MW:	-		Conjugate:	Unconjugate	d		
Calculated MW	: 105kDa		lsotype:	lgG			

Immunogen Information

Background	This gene encodes a 105 kD protein which can undergo cotranslational processing by the 26S
	proteasome to produce a 50 kD protein. The 105 kD protein is a Rel protein-specific transcription
	inhibitor and the 50 kD protein is a DNA binding subunit of the NF-kappa-B (NFKB) protein complex.
	NFKB is a transcription regulator that is activated by various intra- and extra-cellular stimuli such as
	cytokines, oxidant-free radicals, ultraviolet irradiation, and bacterial or viral products. Activated NFKB
	translocates into the nucleus and stimulates the expression of genes involved in a wide variety of
	biological functions. Inappropriate activation of NFKB has been associated with a number of
	inflammatory diseases while persistent inhibition of NFKB leads to inappropriate immune cell
	development or delayed cell growth. NFKB is a critical regulator of the immediate-early response to viral
	infection. Alternative splicing results in multiple transcript variants encoding different isoforms, at least
	one of which is proteolytically processed.
Recommended Dilution:	IF/ICC,1:100 - 1:200
Synonyms:	KBF1; EBP-1; NF-kB; CVID12; NF-kB1; NFKB-p50; NFkappaB; NF-kappaB; NFKB-p105; NF-kappa-B1; NF-
	kappabeta; Phospho-NFKB1-S893
Purifcation Method:	Affinity purification
Immunogen:	A phospho specific peptide corresponding to residues surrounding S893 of human NFKB1
Storage:	Store at -20°C. Avoid freeze / thaw cycles.Buffer: PBS with 0.02% sodium azide,50% glycerol,pH7.3.
