This gene is a member of the Src family of protein tyrosine kinases (PTKs). The encoded protein

is a key signaling molecule in the selection and maturation of developing T-cells. It contains N-

terminal sites for myristylation and palmitylation, a PTK domain, and SH2 and SH3 domains which are involved in mediating protein-protein interactions with phosphotyrosine-containing

and proline-rich motifs, respectively. The protein localizes to the plasma membrane and pericentrosomal vesicles, and binds to cell surface receptors, including CD4 and CD8, and other

signaling molecules. Multiple alternatively spliced variants encoding different isoforms have

Western blot analysis of extracts of Jurkat cells, using Phospho-SRC Family-Y416 antibody (CABP0491) at 1:1000 dilution. Jurkat cells were treated by UV at room temperature for 15-30 minutes. Secondary antibody: HRP Goat Anti-Rabbit IgG (H+L) (CABS014) at 1:10000 dilution. Lysates/proteins: 25ug per lane. Blocking buffer: 3% nonfat dry milk in TBST. Detection: ECL Enhanced Kit (RM00070). Exposure time: .

Immunoprecipitation analysis of 200ug extracts of Jurkat cells, using 3 ug Phospho-SRC Family-Y416 pAb (CABP0491). Western blot was performed from the immunoprecipitate using Phospho-Lck-Y416/FYN-Y416 pAb (CABP0491) at a dilition of 1:1000. Jurkat cells were treated by Hydrogen Peroxide (2 mM) at 37'C for 2 minutes after serum-starvation overnight.
