Phospho-elF2Alpha-S51 Rabbit Monoclonal Antibody

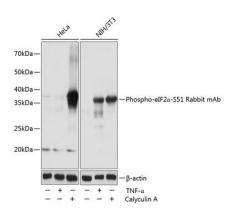

CABP0692

Product Information	Protein Background
Size:	The translation initiation factor EIF2 catalyzes the first regulated step of protein synthesis
20uL, 50uL, 100uL	initiation, promoting the binding of the initiator tRNA to 40S ribosomal subunits. Binding occurs as a ternary complex of methionyl-tRNA, EIF2, and GTP. EIF2 is composed of 3
Observed MW:	nonidentical subunits, the 36-kD EIF2-alpha subunit (EIF2S1), the 38-kD EIF2-beta subunit (EIF2S2; MIM 603908), and the 52-kD EIF2-gamma subunit (EIF2S3; MIM 300161). The rate of
36KDa	formation of the ternary complex is modulated by the phosphorylation state of EIF2-alpha (Ernst et al., 1987 [PubMed 2948954]).[supplied by OMIM, Feb 2010]
