Phospho-NFKB1-S932 Rabbit Polyclonal Antibody

This gene encodes a 105 kD protein which can undergo cotranslational processing by the 26S

proteasome to produce a 50 kD protein. The 105 kD protein is a Rel protein-specific

transcription inhibitor and the 50 kD protein is a DNA binding subunit of the NF-kappa-B (NFKB) protein complex. NFKB is a transcription regulator that is activated by various intra- and

extra-cellular stimuli such as cytokines, oxidant-free radicals, ultraviolet irradiation, and bacterial or viral products. Activated NFKB translocates into the nucleus and stimulates the

expression of genes involved in a wide variety of biological functions. Inappropriate activation

of NFKB has been associated with a number of inflammatory diseases while persistent inhibition of NFKB leads to inappropriate immune cell development or delayed cell growth. Alternative

splicing results in multiple transcript variants encoding different isoforms, at least one of which

CABP1064

Product Information

Size:

20uL, 50uL, 100uL, 200uL

Observed MW:

Refer to figures

Calculated MW:

105kDa

Applications:

WB

Reactivity:

Human

Immunogen information

is proteolytically processed.

Protein Background

Gene ID: 4790

P19838

Uniprot

Antibody Information

Recommended dilutions:

WB 1:500 - 1:2000

Source:

Rabbit

Isotype:

Purification: Affinity purification

IgG

Synonyms:

NFKB1; CVID12; EBP-1; KBF1; NF-kB1; NF-kappa-B; NF-kappaB;

NFKB-p105; NFKB-p50; NFkappaB; p105; p50

Immunogen:

A phospho specific peptide corresponding to residues surrounding

S932 of human NFKB1.

Storage:

Store at -20°C. Avoid freeze / thaw cycles. Buffer: PBS with 0.02%

sodium azide, 50% glycerol, pH7.3.
