RNASE3 Antibody

PACO16224

Reactivity:

Human

Source:

Product Information

Size: Protein Background:

50ul Eosinophil Cationic Protein (ECP) also known as ribonuclease 3 is a basic protein located

in the eosinophil primary matrix. In humans, the eosinophil cationic protein is encoded by the RNASE3 gene. ECP is released during degranulation of eosinophils. This protein is related to inflammation and asthma because in these cases, there are increased levels

of ECP in the body. There are three glycosolated forms of ECP and consequently ECP

has a range of molecular weights from 18-22 kDa.

Rabbit Gene ID:

Isotype: RNASE3

lgG Uniprot

Applications: P12724

ELISA, WB, IHC Synonyms:

Recommended dilutions: ribonuclease, RNase A family, 3

ELISA:1:1000-1:2000, WB:1:200-1:1000,

IHC:1:25-1:100

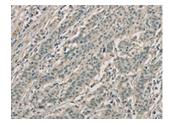

Immunogen:

Fusion protein of human RNASE3.

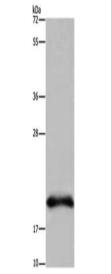

Storage:

-20° C, pH7.4 PBS, 0.05% NaN3, 40% Glycerol

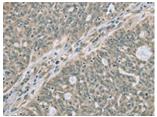

Product Images

The image on the left is immunohistochemistry of paraffin-embedded Human gastric cancer tissue using PACO16224(RNASE3 Antibody) at dilution 1/20, on the right is treated with fusion protein. (Original magnification: x—200).

Gel: 10%SDS-PAGE, Lysate: 40 μ g, Lane: U937 cells, Primary antibody: PACO16224(RNASE3 Antibody) at dilution 1/200, Secondary antibody: Goat anti rabbit IgG at 1/8000 dilution, Exposure time: 3 minutes.

The image on the left is immunohistochemistry of paraffin-embedded Human ovarian cancer tissue using PACO16224(RNASE3 Antibody) at dilution 1/20, on the right is treated with fusion protein. (Original magnification: x—200).
