EPDR1 Antibody

PACO16259

Reactivity:

Human, Mouse, Rat

Product Information

Size: Protein Background:

50ul The protein encoded by this gene is a type II transmembrane protein that is similar to

two families of cell adhesion molecules, the protocadherins and ependymins. This protein may play a role in calcium-dependent cell adhesion. This protein is glycosylated, and the orthologous mouse protein is localized to the lysosome. Alternative splicing

results in multiple transcript variants. A related pseudogene has been identified on

Source: chromosome 8.
