Mepirin A subunit alpha also known as endopeptidase-2 or PABA peptide hydrolase is the alpha subunit of the mepirin A enzyme that in humans is encoded by the MEP1A gene. [1][2]The MEP1A locus is on chromosome 6p in humans and on chromosome 17 in mice. The mepirin alpha subunit product of the MEP1A gene is processed in the endoplasmic reticulum during intracellular transport, and is secreted as homomeric mepirin A.
