Protein Background:

This gene encodes a protein that binds the cancer-testis antigen Synovial Sarcoma X breakpoint 2 protein. The encoded protein may regulate the activity of Synovial Sarcoma X breakpoint 2 protein in malignant cells. Alternate splicing results in multiple transcript variants. A pseudogene of this gene is found on chromosome 3.

Synonyms:

synovial sarcoma, X breakpoint 2 interacting protein

Immunogen:

Fusion protein of human SSX2IP.
