PODXL Antibody

PACO18821

Product Information	
Size:	Protein Background:
50ul	Non-receptor tyrosine kinase involved in various processes such as cell growth, development, differentiation or histone modifications. Mediates essential signaling events in both innate and adaptive immunity. In the cytoplasm, plays a pivotal role in signal transduction via its association with type I receptors such as growth hormone (GHR), prolactin (PRLR), leptin (LEPR), erythropoietin (EPOR), thrombopoietin (THPO); or type II receptors including IFN-alpha, IFN-beta, IFN-gamma and multiple interleukins. Following ligand-binding to cell surface receptors, phosphorylates specific tyrosine residues on the cytoplasmic tails of the receptor, creating docking sites for STATs proteins. Subsequently, phosphorylates the STATs proteins once they are recruited to the receptor. Phosphorylated STATs then form homodimer or heterodimers and translocate to the nucleus to activate gene transcription.
Reactivity:	
Human	
Source:	
Rabbit	
lsotype:	
lgG	
Applications:	Gene ID:
ELISA, IHC	PODXL
Recommended dilutions:	Uniprot
ELISA:1:1000-1:5000, IHC:1:25-1:100	O00592
	Synonyms:
	Podocalyxin-like
	Immunogen:
	Synthetic peptide of human PODXL.
	Storage:
	-20° C, pH7.4 PBS, 0.05% NaN3, 40% Glycerol

The image on the left is immunohistochemistry of paraffin-embedded Human ovarian cancer tissue using PACO18821(PODXL Antibody) at dilution 1/20, on the right is treated with synthetic peptide. (Original magnification: x—200).

The image on the left is immunohistochemistry of paraffin-embedded Human brain tissue using PACO18821(PODXL Antibody) at dilution 1/20, on the right is treated with synthetic peptide. (Original magnification: x—200).
