GNAT3 Antibody

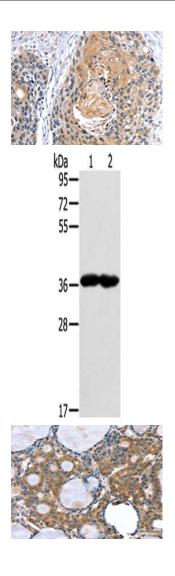

PACO19724

Product Information	
Size:	Protein Background:
50ul	Tumor suppressor probably involved in transcriptional and post-transcriptional control
Reactivity:	pathways. May be involved in cell cycle progression through the regulation of cyclin D1/PRAD1 expression. Component of the PAF1 complex (PAF1C) which has multiple
Human, Mouse, Rat	functions during transcription by RNA polymerase II and is implicated in regulation of development and maintenance of embryonic stem cell pluripotency. PAF1C associates
Source:	with RNA polymerase II through interaction with POLR2A CTD non-phosphorylated and
Rabbit	'Ser-2'- and 'Ser-5'-phosphorylated forms and is involved in transcriptional elongation, acting both indepentently and synergistically with TCEA1 and in cooperation with the
lsotype:	DSIF complex and HTATSF1. PAF1C is required for transcription of Hox and Wnt target genes. PAF1C is involved in hematopoiesis and stimulates transcriptional activity of
lgG	KMT2A/MLL1; it promotes leukemogenesis through association with KMT2A/MLL1-
Applications:	rearranged oncoproteins, such as KMT2A/MLL1-MLLT3/AF9 and KMT2A/MLL1- MLLT1/ENL.
