GREB1 Antibody

PACO19743

Product Information	
Size:	Protein Background:
50ul	As the sensor component of the NLRP3 inflammasome, plays a crucial role in innate
Reactivity:	immunity and inflammation. In response to pathogens and other damage-associated signals, initiates the formation of the inflammasome polymeric complex, made of
Human, Mouse	NLRP3, PYCARD and CASP1 (or possibly CASP4/CASP11). Recruitment of proCASP1 to the inflammasome promotes its activation and CASP1-catalyzed IL1B and IL18
Source:	maturation and secretion in the extracellular milieu. Activation of NLRP3 inflammasome is also required for HMGB1 secretion. The active cytokines and HMGB1 stimulate inflammatory responses. Inflammasomes can also induce pyroptosis, an inflammatory form of programmed cell death. Under resting conditions, NLRP3 is autoinhibited. NLRP3 activation stimuli include extracellular ATP, reactive oxygen species, K(+) efflux, crystals of monosodium urate or cholesterol, beta-amyloid fibers, environmental or industrial particles and nanoparticles, etc. However, it is unclear what constitutes the direct NLRP3 activator.
Rabbit	
lsotype:	
lgG	
Applications:	
Elisa, ihc	Gene ID:
Recommended dilutions:	GREB1
ELISA:1:2000-1:5000, IHC:1:50-1:200	Uniprot
	Q4ZG55
	Synonyms:
	growth regulation by estrogen in breast cancer 1
	Immunogen:
	Synthetic peptide of human GREB1.
	Storage:

-20° C, pH7.4 PBS, 0.05% NaN3, 40% Glycerol

The image on the left is immunohistochemistry of paraffin-embedded Human brain tissue using PACO19743(GREB1 Antibody) at dilution 1/50, on the right is treated with synthetic peptide. (Original magnification: x—200).

The image on the left is immunohistochemistry of paraffin-embedded Human thyroid cancer tissue using PACO19743(GREB1 Antibody) at dilution 1/50, on the right is treated with synthetic peptide. (Original magnification: x—200).
