## **CERS5** Antibody

PACO19928

Product Information	
Size:	Protein Background:
50ul	Serine/threonine-protein kinase involved in various processes such as cell cycle
Reactivity:	regulation, gluconeogenesis and lipogenesis regulation, muscle growth and differentiation and tumor suppression. Phosphorylates HDAC4, HDAC5, PPME1,
Human, Mouse	SREBF1, CRTC1/TORC1 and CRTC2/TORC2. Acts as a tumor suppressor and plays a key role in p53/TP53-dependent anoikis, a type of apoptosis triggered by cell detachment:
Source:	required for phosphorylation of p53/TP53 in response to loss of adhesion and is able to
Rabbit	suppress metastasis. Part of a sodium-sensing signaling network, probably by mediating phosphorylation of PPME1: following increases in intracellular sodium, SIK1 is
lsotype:	activated by CaMK1 and phosphorylates PPME1 subunit of protein phosphatase 2A (PP2A), leading to dephosphorylation of sodium/potassium-transporting ATPase
lgG	ATP1A1 and subsequent increase activity of ATP1A1. Acts as a regulator of muscle cells by phosphorylating and inhibiting class II histone deacetylases HDAC4 and HDAC5, leading to promote expression of MEF2 target genes in myocytes.
Applications:	
ELISA, IHC	Gene ID:
Recommended dilutions:	CERS5
ELISA:1:2000-1:5000, IHC:1:50-1:200	Uniprot
	Q8N5B7
	Synonyms:
	ceramide synthase 5
	Immunogen:
	Synthetic peptide of human CERS5.
	Storage:

-20° C, pH7.4 PBS, 0.05% NaN3, 40% Glycerol

The image on the left is immunohistochemistry of paraffin-embedded Human colon cancer tissue using PACO19928(CERS5 Antibody) at dilution 1/40, on the right is treated with synthetic peptide. (Original magnification: x—200).

The image on the left is immunohistochemistry of paraffin-embedded Human cervical cancer tissue using PACO19928(CERS5 Antibody) at dilution 1/40, on the right is treated with synthetic peptide. (Original magnification: x—200).
