STYK1 Antibody

PACO20623

Product Information	
Size:	Protein Background:
50ul	Required for DNA repair. Binds to DDB1 to form the UV-damaged DNA-binding
Reactivity:	protein complex (the UV-DDB complex). The UV-DDB complex may recognize UV- induced DNA damage and recruit proteins of the nucleotide excision repair pathway
Human	(the NER pathway) to initiate DNA repair. The UV-DDB complex preferentially binds to cyclobutane pyrimidine dimers (CPD), 6-4 photoproducts (6-4 PP), apurinic sites and
Source:	short mismatches. Also appears to function as the substrate recognition module for the
Rabbit	DCX (DDB1-CUL4-X-box) E3 ubiquitin-protein ligase complex DDB1-CUL4-ROC1 (also known as CUL4-DDB-ROC1 and CUL4-DDB-RBX1). The DDB1-CUL4-ROC1 complex
lsotype:	may ubiquitinate histone H2A, histone H3 and histone H4 at sites of UV-induced DNA damage. The ubiquitination of histones may facilitate their removal from the
lgG	nucleosome and promote subsequent DNA repair. The DDB1-CUL4-ROC1 complex
Applications:	also ubiquitinates XPC, which may enhance DNA-binding by XPC and promote NER. Isoform D1 and isoform D2 inhibit UV-damaged DNA repair.
ELISA, WB	Gene ID:
Recommended dilutions:	STYK1
ELISA:1:2000-1:5000, WB:1:500-1:2000	Uniprot
	Q6J9G0
	Synonyms:
	serine/threonine/tyrosine kinase 1
	Immunogen:
	Synthetic peptide of human STYK1.
	Storage:

-20° C, pH7.4 PBS, 0.05% NaN3, 40% Glycerol

Gel: 8%SDS-PAGE, Lysate: 40 ug, Lane: A431 cells, Primary antibody: PACO20623(STYK1 Antibody) at dilution 1/500, Secondary antibody: Goat anti rabbit IgG at 1/8000 dilution, Exposure time: 2 minutes.
