## **TBC1D1 Antibody**

## PACO20662

## **Product Information**

Size:

50ul

Reactivity: Human

Source:

Rabbit

Isotype:

lgG

**Applications:** 

ELISA, IHC

**Recommended dilutions:** 

ELISA:1:2000-1:5000, IHC:1:40-1:150

**Protein Background:** 

Primordial germ cell (PGCs)-specific protein involved in epigenetic chromatin reprogramming in the zygote following fertilization. In zygotes, DNA demethylation occurs selectively in the paternal pronucleus before the first cell division, while the adjacent maternal pronucleus and certain paternally-imprinted loci are protected from this process. Participates in protection of DNA methylation in the maternal pronucleus by preventing conversion of 5mC to 5hmC: specifically recognizes and binds histone H3 dimethylated at 'Lys-9' (H3K9me2) on maternal genome, and protects maternal genome from TET3-mediated conversion to 5hmC and subsequent DNA demethylation. Does not bind paternal chromatin, which is mainly packed into protamine and does not contain much H3K9me2 mark. Also protects imprinted loci that are marked with H3K9me2 in mature sperm from DNA demethylation in early embryogenesis. May be important for the totipotent/pluripotent states continuing

through preimplantation development.

Gene ID:

TBC1D1

Uniprot

Q86TI0

Synonyms:

TBC1 (tre-2/USP6, BUB2, cdc16) domain family, member 1

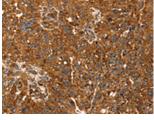

Immunogen:

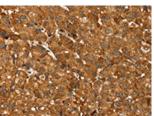

Synthetic peptide of human TBC1D1.

Storage:

-20° C, pH7.4 PBS, 0.05% NaN3, 40% Glycerol

## **Product Images**

The image on the left is immunohistochemistry of paraffin-embedded Human breast cancer tissue using PACO20662(TBC1D1 Antibody) at dilution 1/45, on the right is treated with synthetic peptide. (Original magnification: x—200).

The image on the left is immunohistochemistry of paraffin-embedded Human liver cancer tissue using PACO20662(TBC1D1 Antibody) at dilution 1/45, on the right is treated with synthetic peptide. (Original magnification: x—200).
