CCND2 (Ab-280) Antibody

PACO21624

Product Information	
Size:	Protein Background:
100ul	Regulatory component of the cyclin D2-CDK4 (DC) complex that phosphorylates and
Reactivity:	inhibits members of the retinoblastoma (RB) protein family including RB1 and regulates the cell-cycle during G1/S transition. Phosphorylation of RB1 allows dissociation of the
Human, Mouse	transcription factor E2F from the RB/E2F complex and the subsequent transcription of E2F target genes which are responsible for the progression through the G1 phase.
Source:	Hypophosphorylates RB1 in early G1 phase. Cyclin D-CDK4 complexes are major
Rabbit	integrators of various mitogenenic and antimitogenic signals. Also substrate for SMAD3, phosphorylating SMAD3 in a cell-cycle-dependent manner and repressing its
lsotype:	transcriptional activity. Component of the ternary complex, cyclin D2/CDK4/CDKN1B, required for nuclear translocation and activity of the cyclin D-CDK4 complex By
lgG	similarity. Palmero I. , Oncogene 8:1049-1054(1993).
Applications:	Gene ID:
ELISA, WB	CCND2
Recommended dilutions:	Uniprot
ELISA:1:2000-1:10000, WB:1:500-1:3000	P30279
	Synonyms:
	auclin D2: C1/S specific auclin D2:

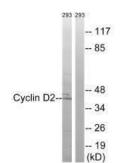

cyclin D2; G1/S-specific cyclin D2;

Immunogen:

Synthesized non-phosphopeptide derived from human Cyclin D2 around the phosphorylation site of threonine 280 (A-S-T(p)-P-T).

Storage:

Rabbit IgG in phosphate buffered saline (without Mg2+ and Ca2+), pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol.

Western blot analysis of extracts from 293 cells, using Cyclin D2 (Ab-280) antibody.
