Product Information	
Size:	Protein Background:
50ug	DNA binding proteins that associates with chromatin and has the ability to bend DNA. Binds preferentially single-stranded DNA. Involved in V(D)J recombination by acting as a cofactor of the RAG complex. Acts by stimulating cleavage and RAG protein binding at the 23 bp spacer of conserved recombination signal sequences (RSS). Heparin- binding protein that has a role in the extension of neurite-type cytoplasmic processes in developing cells.
