Histone H2B Antibody

PACO34630

Product Information

Size: Protein Background:

50ug Core component of nucleosome. Nucleosomes wrap and compact DNA into chromatin,

limiting DNA accessibility to the cellular machineries which require DNA as a template.

Histones thereby play a central role in transcription regulation, DNA repair, DNA

replication and chromosomal stability. DNA accessibility is regulated via a complex set of post-translational modifications of histones, also called histone code, and

or post translational modifications of histories, also called histori

nucleosome remodeling.

Rabbit Gene ID:

Isotype:

Source:

Reactivity:

Cairina moschata

lgG Uniprot

Applications: P14001

ELISA Synonyms:

Recommended dilutions: Histone H2B

Immunogen:

Recombinant Crocodylus niloticus Histone H2B protein (2-93AA).

Storage:

Preservative: 0.03% Proclin 300. Constituents: 50% Glycerol, 0.01M PBS, PH 7.4
