Product Information

Size: Protein Background:

50ug Transcription activator that binds DNA cooperatively with DP proteins through the E2

recognition site, 5'-TTTC[CG]CGC-3' found in the promoter region of a number of genes whose products are involved in cell cycle regulation or in DNA replication. The

DRTF1/E2F complex functions in the control of cell-cycle progression from g1 to s

phase. E2F2 binds specifically to RB1 in a cell-cycle dependent manner.
