PTPMT1 Antibody, HRP conjugated

PACO38055

Product Information

Size: Protein Background:

50ug Lipid phosphatase which dephosphorylates phosphatidylglycerophosphate (PGP) to phosphatidylglycerol (PG). PGP is an essential intermediate in the biosynthetic pathway **Reactivity:**

of cardiolipin, a mitochondrial-specific phospholipid regulating the membrane integrity and activities of the organelle. Has also been shown to display phosphatase activity

Human and activities of the organelle. Has also been shown to display phosphatase activities of the organelle. Has also been shown to display phosphatase activities of the organelle. Has also been shown to display phosphatase activities toward phosphoprotein substrates, specifically mediates dephosphorylation of specific and the organelle. Has also been shown to display phosphatase activities of the organelle. Has also been shown to display phosphatase activities of the organelle. Has also been shown to display phosphatase activities of the organelle. Has also been shown to display phosphatase activities of the organelle. Has also been shown to display phosphatase activities are considered activities.

mitochondrial proteins, thereby playing an essential role in ATP production. Has probably a preference for proteins phosphorylated on Ser and/or Thr residues

Rabbit compared to proteins phosphorylated on Tyr residues. Probably involved in regulation

Isotype: of insulin secretion in pancreatic beta cells.

lgG Gene ID:

Applications: PTPMT1

ELISA Uniprot

Q8WUK0 Recommended dilutions:

Synonyms:

Phosphatidylglycerophosphatase and protein-tyrosine phosphatase 1 (EC 3.1.3.27) (PTEN-like phosphatase) (Phosphoinositide lipid phosphatase) (Protein-tyrosine phosphatase mitochondrial 1) (EC 3.1.3.16) (EC 3.1.3.48), PTPMT1, MOSP PLIP

Immunogen:

Recombinant Human Phosphatidylglycerophosphatase and protein-tyrosine phosphatase 1 protein (28-201AA).

Storage:

Preservative: 0.03% Proclin 300. Constituents: 50% Glycerol, 0.01M PBS, PH 7.4
