## **Product Information**

Size: Protein Background:

Responsible for the deiodination of T4 (3,5,3',5'-tetraiodothyronine) into RT3 (3,3',5'-triiodothyronine) and of T3 (3,5,3'-triiodothyronine) into T2 (3,3'-diiodothyronine). RT3

and T2 are inactive metabolites. May play a role in preventing premature exposure of developing fetal tissues to adult levels of thyroid hormones. Can regulate circulating

fetal thyroid hormone concentrations throughout gestation. Essential role for regulation

of thyroid hormone inactivation during embryological development.
