Product Information

Size: Protein Background:

50ug Key regulator of mitochondrial calcium uniporter (MCU) required to limit calcium

uptake by MCU when cytoplasmic calcium is low. MICU1 and MICU2 form a disulfide-

linked heterodimer that stimulate and inhibit MCU activity, depending on the

Human concentration of calcium. MICU2 acts as a gatekeeper of MCU that senses calcium level

via its EF-hand domains: prevents channel opening at resting calcium, avoiding energy

dissipation and cell-death triggering.
