HIST1H4A (Ab-3) Antibody

PACO56516

Reactivity:

Rabbit

Human, Mouse

Product Information

Size: Protein Background:

50ul Core component of nucleosome. Nucleosomes wrap and compact DNA into chromatin,

limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA

replication and chromosomal stability. DNA accessibility is regulated via a complex set

of post-translational modifications of histones, also called histone code, and

Source: nucleosome remodeling.

Isotype: HIST1H4A

lgG Uniprot

Applications: P62805

Western Blot. Positive WB detected in: NIH/3T3 cell acid extracts, Hela cell acid extracts. All lanes: HIST1H4A antibody at $1\mu g/ml$. Secondary. Goat polyclonal to rabbit IgG at 1/50000 dilution. Predicted band size: 12 kDa. Observed band size: 12 kDa.

Chromatin Immunoprecipitation Hela (4*10^6

) were treated with Micrococcal Nuclease, sonicated, and immunoprecipitated with $8\mu g$ anti-HIST1H4A (PACO56516) or a control normal rabbit IgG. The resulting ChIP DNA was quantified using real-time PCR with primers against the beta -Globin promoter.

Immunofluorescent analysis of Hela cells using PACO56516 at dilution of 1:100 and Alexa Fluor 488-congugated AffiniPure Goat Anti-Rabbit IgG(H+L).
