

Product Information**Size:**

50ug

Protein Background:

Serine/threonine-protein kinase which is an important downstream effector of CDC42 and plays a role in the regulation of cytoskeleton reorganization and cell migration.

Regulates actin cytoskeletal reorganization via phosphorylation of PPP1R12C and

MYL9/MLC2. In concert with MYO18A and LURAP1, is involved in modulating lamellar actomyosin retrograde flow that is crucial to cell protrusion and migration.

Phosphorylates PPP1R12A.
