## **KCNT1** Antibody

## PACO57176

Product Information	
Size:	Protein Background:
50ug	Outwardly rectifying potassium channel subunit that may coassemble with other Slo-
Reactivity:	type channel subunits. Activated by high intracellular sodium or chloride levels. Activated upon stimulation of G-protein coupled receptors, such as CHRM1 and GRIA1. May be regulated by calcium in the absence of sodium ions (in vitro).
Human	
Source:	Gene ID:
Rabbit	KCNT1
lsotype:	Uniprot
lgG	Q5JUK3
Applications:	Synonyms:
ELISA, IHC, IF	Potassium channel subfamily T member 1 (KCa4.1), KCNT1, KIAA1422
Recommended dilutions:	Immunogen:
ELISA:1:2000-1:10000, IHC:1:200-1:500, IF:1:50-1:200	Recombinant Human Potassium channel subfamily T member 1 protein (1026-1230AA).
	Storage:
	Preservative: 0.03% Proclin 300. Constituents: 50% Glycerol, 0.01M PBS, pH 7.4

IHC image of PACO57176 diluted at 1:400 and staining in paraffinembedded human prostate cancer performed on a Leica BondTM system. After dewaxing and hydration, antigen retrieval was mediated by high pressure in a citrate buffer (pH 6.0). Section was blocked with 10% normal goat serum 30min at RT. Then primary antibody (1% BSA) was incubated at 4°C overnight. The primary is detected by a biotinylated secondary antibody and visualized using an HRP conjugated SP system.

Immunofluorescence staining of HepG2 cells with PACO57176 at 1:133, counter-stained with DAPI. The cells were fixed in 4% formaldehyde, permeabilized using 0.2% Triton X-100 and blocked in 10% normal Goat Serum. The cells were then incubated with the antibody overnight at 4°C. The secondary antibody was Alexa Fluor 488-congugated AffiniPure Goat Anti-Rabbit IgG(H+L).
