2-hydroxyisobutyryl-HIST1H2BC (K12) Antibody

PACO60519

Reactivity:

Product Information

Size: Protein Background:

50ul Core component of nucleosome. Nucleosomes wrap and compact DNA into chromatin,

limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA

Human replication and chromosomal stability. DNA accessibility is regulated via a complex set

of post-translational modifications of histones, also called histone code, and

Source: nucleosome remodeling.

Rabbit Gene ID:

Isotype: HIST1H2BC

Immunofluorescence staining of Hela cells (treated with 30mM sodium

Immunocytochemistry analysis of PACO60519 diluted at 1:15 and staining in Hela cells (treated with 30mM sodium butyrate for 4h) performed on a Leica BondTM system. The cells were fixed in 4% formaldehyde, permeabilized using 0.2% Triton X-100 and blocked with 10% normal goat serum 30min at RT. Then primary antibody (1% BSA) was incubated at 4°C overnight. The primary is detected by a biotinylated secondary antibody and visualized using an HRP conjugated SP system.
