## **METAP2 Recombinant Antibody**

## **RACO0512**

Human

## **Product Information**

Size: **Protein Background:** 

50ul Cotranslationally removes the N-terminal methionine from nascent proteins. The N-

terminal methionine is often cleaved when the second residue in the primary sequence Reactivity: is small and uncharged (Met-Ala-, Cys, Gly, Pro, Ser, Thr, or Val). The catalytic activity of

human METAP2 toward Met-Val peptides is consistently two orders of magnitude

higher than that of METAP1, suggesting that it is responsible for processing proteins

Source: containing N-terminal Met-Val and Met-Thr sequences in vivo.

Homo sapiens (Human) Gene ID:

METAP2 Isotype:

Rabbit IgG Uniprot

P50579 **Applications:** 

ELISA, IHC Synonyms:

Methionine aminopeptidase 2 (MAP 2) (MetAP 2) (EC 3.4.11.18) (Initiation factor 2-**Recommended dilutions:** 

associated 67 kDa glycoprotein) (p67) (p67eIF2) (Peptidase M), METAP2, MNPEP IHC:1:50-1:200

P67EIF2

Immunogen:

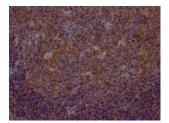

A synthesized peptide derived from human Methionine Aminopeptidase 2.

Storage:

Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium azide and

50% glycerol.

## **Product Images**

IHC image of RACO0512 diluted at 1:100 and staining in paraffinembedded human tonsil tissue performed on a Leica BondTM system. After dewaxing and hydration, antigen retrieval was mediated by high pressure in a citrate buffer (pH 6.0). Section was blocked with 10% normal goat serum 30min at RT. Then primary antibody (1% BSA) was incubated at 4°C overnight. The primary is detected by a Goat antirabbit IgG polymer labeled by HRP and visualized using 0.05% DAB.
