## **MYBBP1A Recombinant Antibody**

## **RACO0547**

Reactivity:

Human

## **Product Information**

Size: Protein Background:

50ul May activate or repress transcription via interactions with sequence specific DNA-binding proteins. Repression may be mediated at least in part by histone deacetylase

activity (HDAC activity). Acts as a corepressor and in concert with CRY1, represses the transcription of the core circadian clock component PER2. Preferentially binds to

dimethylated histone H3 'Lys-9' (H3K9me2) on the PER2 promoter.

Source:

Gene ID:

Homo sapiens (Human)
MYBBP1A

Isotype: Uniprot

Rabbit IgG Q9BQG0

Applications: Synonyms:

ELISA, IHC, IF
Myb-binding protein 1A, MYBBP1A, P160

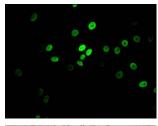

Recommended dilutions: Immunogen:

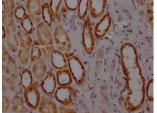

IHC:1:50-1:200, IF:1:20-1:200
A synthesized peptide derived from human MYBBP1A.

Storage:

Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol.

## **Product Images**

Immunofluorescence staining of HepG2 Cells with RACO0547 at 1:50, counter-stained with DAPI. The cells were fixed in 4% formaldehyde, permeated by 0.2% TritonX-100, and blocked in 10% normal Goat Serum. The cells were then incubated with the antibody overnight at 4°C. Nuclear DNA was labeled in blue with DAPI. The secondary antibody was FITC-conjugated AffiniPure Goat Anti-Rabbit IgG (H+L).

IHC image of RACO0547 diluted at 1:100 and staining in paraffinembedded human kidney tissue performed on a Leica BondTM system. After dewaxing and hydration, antigen retrieval was mediated by high pressure in a citrate buffer (pH 6.0). Section was blocked with 10% normal goat serum 30min at RT. Then primary antibody (1% BSA) was incubated at 4°C overnight. The primary is detected by a Goat antirabbit IgG polymer labeled by HRP and visualized using 0.05% DAB.
