## **BTK Recombinant Antibody**

## **RACO0551**

50ul

Human

## **Product Information**

Size: **Protein Background:** 

Non-receptor tyrosine kinase indispensable for B lymphocyte development, differentiation and signaling. Binding of antigen to the B-cell antigen receptor (BCR) Reactivity: triggers signaling that ultimately leads to B-cell activation. After BCR engagement and

activation at the plasma membrane, phosphorylates PLCG2 at several sites, igniting the downstream signaling pathway through calcium mobilization, followed by activation of

Source: the protein kinase C (PKC) family members. PLCG2 phosphorylation is performed in

close cooperation with the adapter protein B-cell linker protein BLNK. Homo sapiens (Human)

Gene ID: Isotype:

BTK Rabbit IgG

Uniprot **Applications:** 

Q06187 ELISA, IHC

Synonyms: **Recommended dilutions:** 

Tyrosine-protein kinase BTK (EC 2.7.10.2) (Agammaglobulinemia tyrosine kinase) (ATK) IHC:1:50-1:200 (B-cell progenitor kinase) (BPK) (Bruton tyrosine kinase), BTK, AGMX1 ATK BPK

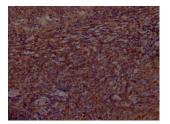

Immunogen:

A synthesized peptide derived from human BTK.

Storage:

Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol.

## **Product Images**

IHC image of RACO0551 diluted at 1:100 and staining in paraffinembedded human tonsil tissue performed on a Leica BondTM system. After dewaxing and hydration, antigen retrieval was mediated by high pressure in a citrate buffer (pH 6.0). Section was blocked with 10% normal goat serum 30min at RT. Then primary antibody (1% BSA) was incubated at 4°C overnight. The primary is detected by a Goat antirabbit IgG polymer labeled by HRP and visualized using 0.05% DAB.
