

# Recombinant Protein Technical Manual

## Recombinant Human FKBP3/FKBP25 Protein (GST Tag)

RPES2366

### Product Data:

**Product SKU:** RPES2366

**Size:** 20µg

**Species:** Human

**Expression host:** E. coli

**Uniprot:** Q00688

### Protein Information:

**Molecular Mass:** 52 kDa

**AP Molecular Mass:** 48 kDa

**Tag:** N-GST

**Bio-activity:**

**Purity:** > 90 % as determined by reducing SDS-PAGE.

**Endotoxin:** Please contact us for more information.

**Storage:** Lyophilized proteins are stable for up to 12 months when stored at -20 to -80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of reconstituted samples are stable at < -20°C for 3 months.

**Shipping:** This product is provided as lyophilized powder which is shipped with ice packs.

**Formulation:** Lyophilized from sterile 50mM tris, 0.15M NaCl, 0.5mM GSH, pH 8.0

**Reconstitution:** Please refer to the printed manual for detailed information.

**Application:**

**Synonyms:** Peptidyl-prolyl cis-trans isomerase FKBP3;PPIase FKBP3;25 kDa FK506-binding protein;25 kDa FKBP;FKBP-25;FK506-binding protein 3;FKBP-3;Immunophilin FKBP25;Rapamycin-selective 25 kDa immunophilin;Rotamase;FKBP25

## Immunogen Information:

**Sequence:** Ala 2-Asp 224

## Background:

BLBP, also known as FABP7, is a brain fatty acid binding protein. Fatty acid binding proteins (FABPs) are a family of small, highly conserved, cytoplasmic proteins that bind long-chain fatty acids and other hydrophobic ligands. FABP7 binds DHA with the highest affinity among all of the FABPs. FABPs may play roles in fatty acid uptake, transport, and metabolism. BLBP is expressed, during development, in radial glia by the activation of notch receptors. It was shown that reelin induces FABP7 expression in neural progenitor cells via notch activation. BLBP variation is linked to weak prepulse inhibition (PPI) in mice and deficit in PPI is an endophenotypic trait observed in schizophrenia patients and their relatives.
