

Recombinant Protein Technical Manual

Recombinant Human GH1/Growth hormone 1 Protein (Active) RPES3115

Product Data:

Product SKU: RPES3115

Size: 20µg

Species: Human

Expression host: E. coli

Uniprot: P01241

Protein Information:

Molecular Mass: 22.1 kDa

AP Molecular Mass:

Tag:

Bio-activity: Measured by its ability to promote proliferation of INS cells. The ED50 for this effect is 0.2 ng/mL.

Purity: > 90 % as determined by reducing SDS-PAGE.

Endotoxin: Please contact us for more information.

Storage: Lyophilized proteins are stable for up to 12 months when stored at -20 to -80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of reconstituted samples are stable at < -20°C for 3 months.

Shipping: This product is provided as lyophilized powder which is shipped with ice packs.

Formulation: Lyophilized from sterile PBS, pH 7.4

Reconstitution: Please refer to the printed manual for detailed information.

Application: Cell Culture

Synonyms: GH;GH-N;GH1;GHB5;GHN;Growth hormone 1;hGH-N;IGHD1B

Immunogen Information:

Sequence: Phe27-Phe217

Background:

The protein encoded by this gene is a member of the somatotropin/prolactin family of hormones which play an important role in growth control. The gene, along with four other related genes, is located at the growth hormone locus on chromosome 17 where they are interspersed in the same transcriptional orientation; an arrangement which is thought to have evolved by a series of gene duplications. The five genes share a remarkably high degree of sequence identity. Alternative splicing generates additional isoforms of each of the five growth hormones, leading to further diversity and potential for specialization. This particular family member is expressed in the pituitary but not in placental tissue as is the case for the other four genes in the growth hormone locus. Mutations in or deletions of the gene lead to growth hormone deficiency and short stature.
