

Recombinant Protein Technical Manual Recombinant Human Renin Protein (His Tag)

RPES5191

## Product Data:

Product	SKU: R	RPES5191
---------	--------	----------

Species: Human

Size: 10µg Expression host: Human Cells

Uniprot: P00797

Protein Information:

Molecular Mass:	44 kDa	
AP Molecular Mass:	43-50 kDa	
Tag:	C-His	
Bio-activity:		
Purity:	> 95% as determined by reducing SDS-PAGE.	
Endotoxin:	< 1.0 EU per $\mu g$ as determined by the LAL method.	
Storage:	Lyophilized protein should be stored at < -20°C, though stable at room temperature for 3 weeks. Reconstituted protein solution can be stored at 4-7°C for 2-7 days. Aliquots of reconstituted samples are stable at < -20°C for 3 months.	
Shipping:	This product is provided as lyophilized powder which is shipped with ice packs.	
Formulation:	Lyophilized from a 0.2 $\mu$ m filtered solution of PBS, pH7.4.	
Reconstitution:	Please refer to the printed manual for detailed information.	
Application:		
Synonyms:	Renin; Angiotensinogenase; REN; Angiotensin-forming enzyme	

## Sequence: Leu24-Arg406

## Background:

Renin is a member of the aspartyl proteinase family produced largely in part by the juxtaglomerular cells in the kidney. Renin is produced as prorenin with 43 pro residues at the N-terminal of mature Renin. The inactive prorenin becomes activated proteolytically by trypsin, cathepsin B, or other proteinases. Renin also has a very high selectivity for substrates due to a long peptide recognition on either side of the peptide bond undergoing cleavage. An octapeptide substrate was the minimum length to be cleaved by Renin. Renin plays a crucial role in the regulation of blood pressure and salt balance through the cleavage of angiotensinogen, which is the only known physiological substrate of Renin. Renin releases the decapeptide angiotensin I, which in turn is further converted to vasoactive hormone angiotensin II by angiotensin converting enzyme (ACE).
