

## HDFP176

### Product Information

<b>Product SKU:</b>	HDFP176	<b>Expression Host:</b>	HEK293	<b>Size:</b>	10µg
<b>Target:</b>	ADA1D	<b>Tag:</b>	C-Flag Tag		

### Additional Information

<b>Conjugate:</b>	Unconjugated	<b>Uniprot ID:</b>	P25100
<b>Molecular Weight:</b>	The human full length ADA1D protein has a MW of 60.5kDa		

### Protein Information

<b>Background:</b>	Alpha-1-adrenergic receptors (alpha-1-ARs) are members of the G protein-coupled receptor superfamily. They activate mitogenic responses and regulate growth and proliferation of many cells. There are 3 alpha-1-AR subtypes: alpha-1A, -1B and -1D, all of which signal through the Gq/11 family of G-proteins and different subtypes show different patterns of activation. This gene encodes alpha-1D-adrenergic receptor. Similar to alpha-1B-adrenergic receptor gene, this gene comprises 2 exons and a single intron that interrupts the coding region. [provided by RefSeq, Jul 2008]
<b>Synonyms:</b>	ADRA1, ADRA1A, ADRA1R, ALPHA1, DAR, dJ779E11.2
<b>Protein Description:</b>	Human ADA1D full length protein-synthetic nanodisc
<b>Formulation:</b>	Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments.
<b>Protein Pathways:</b>	Calcium regulation in cardiac cells, GPCRDB Class A Rhodopsin-like, GPCRDB Other, Monoamine GPCRs, Cell Cycle.
<b>Protein Families:</b>	GPCR, Transmembrane, Druggable Genome.
<b>Usage:</b>	Research use only

**Storage & Shipping:** Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
