## **Nanodisc Human MCLN2 Protein**

## HDFP678

## **Product Information**

<b>Product SKU</b> :	HDFP678	Expression Host:	HEK293	Size:	10µg
Target:	MCLN2	Tag:	C-Flag Tag		
Additional Infor Conjugate:	<b>mation</b> Unconjugat	ed <b>Uni</b> ț	prot ID:	Q8IZK6	
Molecular Wei	<b>ght:</b> The human	full length MCLN2 p	rotein has a	MW of 65.9kDa	
Protein Informa	tion				

<b>Background</b> :	Mucolipins constitute a family of cation channel proteins with homology to the		
	transient receptor potential superfamily. In mammals, the mucolipin family includes		
	3 members, MCOLN1 (MIM 605248), MCOLN2, and MCOLN3 (MIM 607400), that		
	exhibit a common 6-membrane-spanning topology. Homologs of mammalian		
	mucolipins exist in Drosophila and C. elegans. Mutations in the human MCOLN1 gene		
	cause mucolipodosis IV (MIM 262650) (Karacsonyi et al., 2007 [PubMed		
	17662026]).[supplied by OMIM, Sep 2009]		
Synonyms:	TRP-ML2, TRPML2		
<b>Protein Description</b> :	Human MCLN2 full length protein-synthetic nanodisc		
<b>Formulation</b> :	Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH		
	8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please		
	see Certificate of Analysis for specific instructions. Do not use solvents with a pH		
	below 6.5 or those containing high concentrations of divalent metal ions (greater		
	than 5 mM) in subsequent experiments.		
Protein Pathways:	-		
Protein Families:	Ion Channels: Transient receptor potential.		
Usage:	Research use only		

**Storage & Shipping**: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
