Nanodisc Human GRIA1 Protein

HDFP747

Product Information

Product SKU: HDFP747 Expression Host: HEK293 Size: 10μg

Target: GRIA1 **Tag**: C-Flag Tag

Additional Information

Conjugate: Unconjugated Uniprot ID: P42261

Molecular Weight: The human full length GRIA1 protein has a MW of 101.5kDa

Protein Information

Background: Glutamate receptors are the predominant excitatory neurotransmitter receptors in

the mammalian brain and are activated in a variety of normal neurophysiologic

processes. These receptors are heteromeric protein complexes with multiple

subunits, each possessing transmembrane regions, and all arranged to form a ligand-

gated ion channel. The classification of glutamate receptors is based on their

activation by different pharmacologic agonists. This gene belongs to a family of

alpha-amino-3-hydroxy-5-methyl-4-isoxazole propionate (AMPA) receptors.

Alternatively spliced transcript variants encoding different isoforms have been found

for this gene. [provided by RefSeq, Jul 2008]

Synonyms: GLUH1, GLUR1, GLURA, GluA1, HBGR1

Protein Description: Human GRIA1 full length protein-synthetic nanodisc

Formulation: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH

8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please

see Certificate of Analysis for specific instructions. Do not use solvents with a pH

below 6.5 or those containing high concentrations of divalent metal ions (greater

than 5 mM) in subsequent experiments.

Protein Pathways: -

Protein Families: Ion Channels: Glutamate Receptors.

Usage: Research use only

Storage & Shipping:

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
