Nanodisc Human ADA1B-Strep Protein

HDFP913

Product Information

Product SKU: HDFP913 Expression Host: HEK293 Size: 10μg

Target: ADA1B **Tag**: C-Flag&Strep Tag

Additional Information

Conjugate: Unconjugated **Uniprot ID**: P35368

Molecular Weight: The human full length ADA1B-Strep protein has a MW of 56.8 kDa

Protein Information

Background: Alpha-1-adrenergic receptors (alpha-1-ARs) are members of the G protein-coupled

receptor superfamily. They activate mitogenic responses and regulate growth and

proliferation of many cells. There are 3 alpha-1-AR subtypes: alpha-1A, -1B and -1D,

all of which signal through the Gq/11 family of G-proteins and different subtypes

show different patterns of activation. This gene encodes alpha-1B-adrenergic

receptor, which induces neoplastic transformation when transfected into NIH 3T3

fibroblasts and other cell lines. Thus, this normal cellular gene is identified as a

protooncogene. This gene comprises 2 exons and a single large intron of at least 20

kb that interrupts the coding region. [provided by RefSeq, Jul 2008]

Synonyms: ADRA1, ALPHA1BAR

Protein Description: Human ADA1B-Strep full length protein-synthetic nanodisc

Formulation: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH

8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please

see Certificate of Analysis for specific instructions. Do not use solvents with a pH

below 6.5 or those containing high concentrations of divalent metal ions (greater

than 5 mM) in subsequent experiments.

Protein Pathways: Calcium regulation in cardiac cells, GPCRDB Class A Rhodopsin-like, Monoamine

GPCRs, Cell Cycle.

Protein Families: GPCR, Transmembrane, Druggable Genome.

Usage: Research use only

Storage & Shipping: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing

and thawing). Lyophilized proteins are shipped at ambient temperature.
